BVPI 84a – Number of kilograms of household waste collected per head of population

What the indicator measures:

$$\frac{\textbf{Total tonnage of household waste arisings}}{\textbf{Population in authority area}} \times 1000$$

Numerator — Total tonnage of household waste arisings

Denominator — Population in authority area

How the numerator and denominator are calculated using WasteDataFlow is summarised below setting out the questions data are drawn from.

Numerator

1. Total tonnage of household waste collected for recycling from Q14	Excludes rubble and re-use. Material rejected is not deducted as this is part of the total household waste arisings.

+

2. Total tonnage of residual household waste from Q23	All collected household waste, CA site household, separately collected healthcare waste & gully emptyings. A WDA reports waste from all constituent WCAs in Q23.

+

3. From each constituent WCA. Total tonnage of household waste collected for recycling (Q10, Q12, Q16, Q17, Q18 household column, Q33, Q34)	All household recycling tonnages from the constituent WCA are included in the WDA Denominator. Excludes rubble and re-use. Material rejected is not deducted as this is part of the total household waste arisings.

Denominator

1.Population in authority area from Q1	Information is based on Office of National Statistics mid-year figures for population & is updated annually
