

Q10 – Kerbside Recycling Collection Question

Co-mingled Material = 2,000 tonnes (Only place tonnages in as co-mingled if they are NOT kerbside sorted)

Q58 – MRF Question

Tonnage Input = 2,000 tonnes

Tonnes for Recycling = 1,800 tonnes

Tonnes rejected to Landfill = 200 tonnes

Tonnes rejected to Energy Recovery = 0 tonnes

If a Local Authority is sending co-mingled material through a MRF, a MRF reject tonnage must be recorded in Question 58.

Q19– Final Destination of Materials sent for Recycling

The net tonnage (Tonnage input – MRF reject) of material from Q58 should be apportioned by material type in Q19

Select end destination name for each material type:

Quantity sent for recycling:

Paper = 1,584 tonnes

Cans = 108 tonnes

Plastic = 108 tonnes

Total tonnes from co-mingled material = 1,800 tonnes

Section 3.8.4 of the WasteDataFlow Guidance Manual gives estimated split by material type for co-mingled material. This should be used if no information is available to the Local Authority on material split of MRF outputs.
